

## \*\*\* PART 2 \*\*\*

### HIGH-CAPACITY ROAD TRANSPORT

### FOCUSSING INNOVATION ON SMARTER MOBILITY SOLUTIONS FOR SMARTER POLICIES

Efficiency improvement up to 33% by 2030

*The AEROFLEX project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement no 769658*

# Agenda

## 14:00h Opening Session:

-  Welcome and rules of the webinar
-  ALICE introduction (by Fernando)
-  Project overview and highlights (by Ben/Per/Giuseppe)

### Use Slido:

-  To make your questions and remarks known
-  To collect opinions
-  To challenges audience
-  To find support for IAP and eDolly
-  To join project ideas beyond AEROFLEX

## ~14:30h Session I - Short presentations followed by Q&A and interactive Sessions on the following topics:

-  **P&G use case and next steps: Smart Loading Units and Tools into Practice (by Ton/Hilal)**
-  Modelling of freight 2040: Implications of High-Capacity Transport (by Andreas/Christoph)
-  e-Dolly and the next steps (by Julius/Henning)
-  Intelligent Access Policies initiative and next steps (by Marta/Elisah)

## ~15:45h Session II - Outlook and closure:

-  R&I opportunities beyond AEROFLEX (by Ben)
-  Horizon Europe opportunities (by Ben)
-  Outlook and closure (by Ben/Fernando)

## Concepts

- Craneable VET trailer, demonstrated last webinar
- Puzzle SW, demonstrated last webinar
- ZF-CVCS CargoCam,
- three concept customer use cases, announced last webinar

## Progress since Sept 2020

- D4.3, preparation of a demonstrator design for smart loading
- Planning three customer use cases, EMS2, T2T-CFL and P&G

## Expected results

- Aerodynamic trailer fit for rail/road transport
- Proof of concept CargoCam, possibility to monitor, measure and optimize loaded goods, an enabler of future automatic (un)/loading goods

# P&G use case

- Volume Optimized Trailer with Flex Floors allows higher load factor by double stacking
- Aeroflex Innovations: Puzzle software and CargoCam developed to enable effective and more efficient planning and control tested in this use case
- Test Lane between two warehouses not possible yet due to covid
- If no tests done in Aeroflex follow up project - testing 3-4 months at P&G

Order\_00000000 - PUZZLE-computation completed. 33 solutions were calculated.

- Flexible floor but difficult for planning
- Puzzle software makes most optimal pallet pattern
- Calculates axle king pin loads
- Creates Different loading patterns
- Loading procedure
- Profile of roof for Aerodyn drag reduction

## Objective

- Improve load optimization, efficiency and indirectly vehicle aerodynamics
- Sensor solution for loading space volume detection inside the trailer
- 3D sensor technology, computer vision-based algorithms and software
- PoC and prototype implementation
- Installation in AEROFLEX trailer and in-field test

## Achievements

- Grid based free/occupied volume detection
- Grayscale image & 3D point cloud data provisioning
- Sensor setup + telematics + cloud backend remote access (installed in AEROFLEX VanEck roof transformable trailer)

## Outlook

- In-field test with Procter & Gamble (planned Q3/2021)
- Final event demonstration and preparations

# CargoCam - Setup & Scope

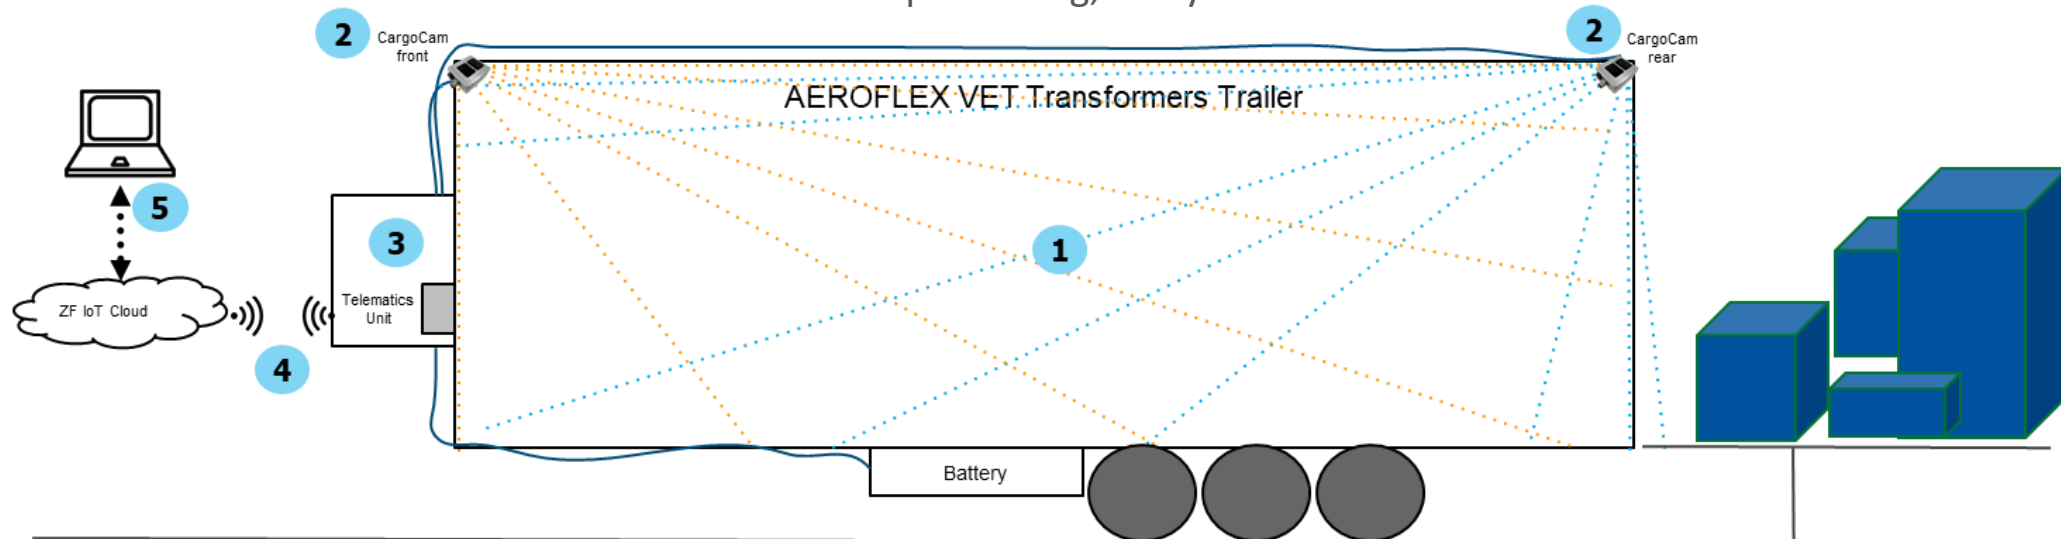

- 🚛 Trailer ~14m, e.g., VanEck trailer with transformable roof
- 🚛 Hardware: 3D sensor(s), box with telematics unit and other equipment
- 🚛 CargoCam steps to determine volume of the loading space in the trailer
  - 1) Measure the cargo loading space and generate 3D point cloud data
  - 2) Apply algorithms on 3D point cloud data to calculate and detect free / occupied volume
  - 3) The telematics unit retrieves the detection results and stores it
  - 4) Detection results can be accessed remotely through the ZF IoT Cloud
  - 5) Detection results can be accessed for further offline processing, analysis and visualization

View of trailer front

View of trailer end

# Discussion and exchange of views

## P&G Use case and CargoCam

- CargoCam as enabler to develop automated (un)loading of freight in trailers and loading units. What is your opinion and where do you see further needs to investigate?
- What benefit brings the combination of Puzzle Software and CargoCam?
- How do you see the market for a double stack trailers and is there currently (in 2021) a request by logistic operators?
- To implement the smart (e-)trailer, what would be the proper cost benefit price model and which features would be of most value / desirable?

discussion

# Agenda

## 14:00h Opening Session:

-  Welcome and rules of the webinar
-  ALICE introduction (by Fernando)
-  Project overview and highlights (by Ben/Per/Giuseppe)

## ~14:30h Session I - Short presentations followed by Q&A and interactive Sessions on the following topics:

-  P&G use case and next steps: Smart Loading Units and Tools into Practice (by Ton/Hilal)
-  **Modelling of freight 2040: Implications of High-Capacity Transport (by Andreas/Christoph)**
-  e-Dolly and the next steps (by Julius/Henning)
-  Intelligent Access Policies initiative and next steps (by Marta/Elisah)

## ~15:45h Session II - Outlook and closure:

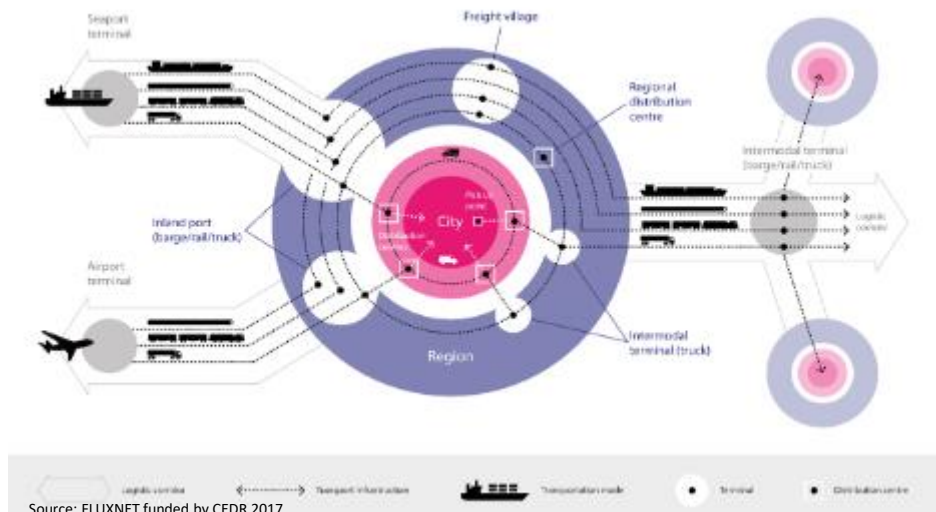

-  R&I opportunities beyond AEROFLEX (by Ben)
-  Horizon Europe opportunities (by Ben)
-  Outlook and closure (by Ben/Fernando)

### Use Slido:

-  To make your questions and remarks known
-  To collect opinions
-  To challenges audience
-  To find support for IAP and eDolly
-  To join project ideas beyond AEROFLEX

## Infrastructure

## Address logistics concepts for cargo consolidation in logistics hubs and intermodal transport chains

## Relevant cargo units

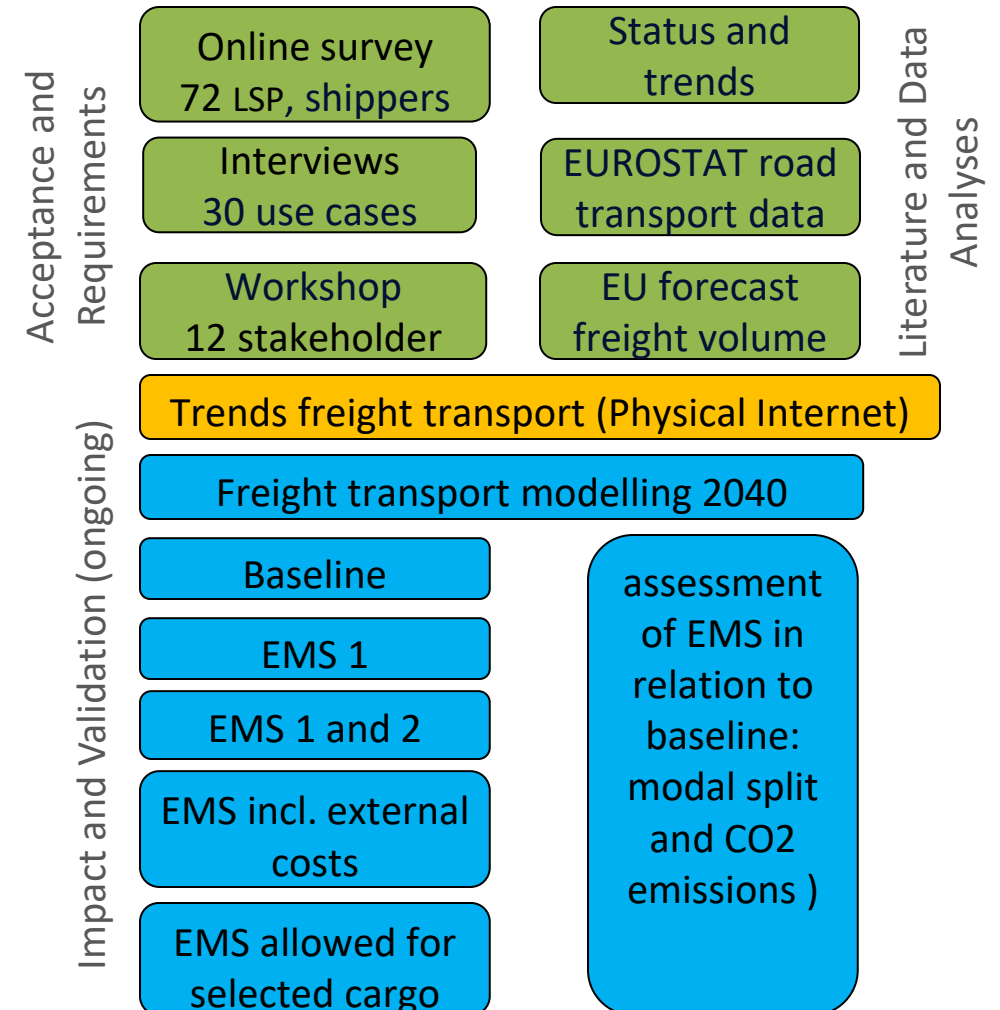

## Address most relevant cargo units – palletized and other cargo collis / customized boxes on long distance transports

# Methodology market requirements

## Concept and Progress since Sept 2020

- Macroscopic freight transport modelling – simulation of modal and mean split
- Development of 5 scenarios
  - Baseline scenario (without High-Capacity Transport (HCT))
  - Scenario 1 - HCT including EMS 1 operating without any restrictions
  - Scenario 2 - HCT including EMS 1 and EMS 2 operating without any restrictions –
  - Two scenario, 3 and 4, to limit a reverse modal shift from rail/IWW to road
    - consideration of external costs of transport
    - selection of cargo groups

## Identify market for HCT

- To address cargo transport with the expected highest tonne-kilometres on long road haulage
- To address growing cargo groups
- To limit a reverse modal shift from rail/IWW to road transport
- To contribute to a reduction of CO<sub>2</sub> emissions generated by EU freight transport

## Characterization of transported cargo in EU-28 in 2016 (EUROSTAT)

# Scenario approach 2040

**Baseline scenario in 2040;**  
tonne-kilometres **increase** in

- 🚂 rail by about 43 %,
- 🚛 road by about 55 % and
- 🚢 IWW by about 19 %

**Target is a comparison HCT (EMS 1 and EMS 2) by scenarios**

- 🚂 show the impact on
  - 🚂 modal shift,
  - 🚛 mean-split from standard truck configurations to HCT
- 🚂 scenario approach
  - 🚛 external costs and
  - 🚢 selection of cargo groups

Projection: Billion tkm on EU-28 in 2040

No EMS + No external Costs + No exclude Cell

# Scenario approach 2040

## Important parameters adjusted in all scenarios

Increase of:

- load factor
- gross combination weight
- equipment / vehicle costs
- average fuel consumption

average increase of costs and GCW  
standard HDV vs EMS1/2

## Assumption average load factor due to use of puzzle software and cargo cam

No commodity group	Description	Assumption average load factor increase in %
4	Food products, beverages and tobacco	30
5	Textiles and textile products; leather and leather products	20
9	Other non-metallic mineral products	10
10	Basic metals; fabricated metal products, except machinery and equipment	15
15	Mail, parcels	50
16	Equipment and material utilized in the transport of goods	25
18	Grouped goods: a mixture of types of goods which are transported together	35
19	Unidentifiable goods: goods which for any reason cannot be identified and therefore cannot be assigned to groups 01-16.	25

## Scenario 3 including external costs

**Objective:** to limit modal shift from rail/IWW to road

- Figure: external costs and the different cost categories most are self explaining
- Road freight transport about 2.4 cent/tonne-kilometres higher than rail/IWW
- Pre and post related processes mean:
  - GHG and air pollutant (up and downstream) generated by maintenance and recycling related to:
    - energy sources (fuels, current)
    - “vehicles”
    - transport infrastructure
    - consequential climate costs

# Scenario 4 excluded cargo groups

**Objective:** prioritization of cargo groups for EMS vehicles

- Table: in red excluded cargo groups to minimize
  - mass commodities (group 1/2/3/7/10) will be shifted from rail/IWW to road
  - commodities not relevant for long road haulage (group 14 / 17)

Cargo group	Description	EMS1/2
1	Products of agriculture, hunting, and forestry; fish and other fishing products	
2	Coal and lignite; crude petroleum and natural gas	
3	Metal ores and other mining and quarrying products; peat; uranium and thorium	
7	Coke and refined petroleum products	
10	Basic metals; fabricated metal products, except machinery and equipment	
14	Secondary raw materials; municipal wastes and other wastes	
17	Goods moved in the course of household / office removals; baggage / articles accompanying travelers; motor vehicles being moved for repair; other nonmarket goods n.e.c.	

# Results of two use cases with EMS

## Use case 1:

- **CO<sub>2</sub> emission reduction potential of -25,81% (-129.6 kg CO<sub>2</sub>e)** due to efficiency gains of EMS2  
(prime candidate 6.1; 92 t vs. 40 t GCW permissible)
- On fleet level, saving factor 2 -> 1
- Intermodal logistic chain (road & water)
- Multiple countries involved (Netherlands, Germany, Finland)

## Use case 2:

- **CO<sub>2</sub> emission reduction potential of -32,44% (-72.0 kg CO<sub>2</sub>e)** due to efficiency gains of EMS1  
(prime candidate 3.2; 76 t vs. 40 t GCW permissible)
- On fleet level, saving factor 4->3
- Single mode logistic chain (road)
- Multiple countries involved (Austria, Germany)

# Benefits and recommendations for industry and society

## Benefits

- 🌐 impact on **CO2 emissions of EU road freight transport** due to decrease of road mileage in road freight transport only in scenario if external costs are considered
- 🌐 **lower average transport costs** for long road-haulage determine impact on modal split
- 🌐 impact on **company (logistics) level** depends on trip and route planning – that could not be derived on macroscopic freight modelling (use case level)
- 🌐 impact of using EMS1 and 2 in combined transport (reduced costs for pre- and post haulage) are not significant enough

## Recommendations

- 🌐 Focus on **good classes with high tonne-kilometres and expected growing of transport volume**
- 🌐 emphasize logistics optimization to **increase load factors** focus on use of EMS1 and 2 in **hub and spoke concepts** of LSP
- 🌐 ramp-up of EMS1 and 2 should **be aligned with intermodal transport concepts** (e.g., flexibility of loading units)

# Feedback request

## SLIDO: Question 1

Which EMS1 und EMS2 vehicle configuration have the potential to become relevant for transport and logistics?

A

B

C

# Feedback request

## SLIDO: Question 2

- Select cargo groups to prioritize for EMS
- Other (use chat)

Cargo group	Description	Excluded EMS1/2
1	Products of agriculture, hunting, and forestry; fish and other fishing products	
2	Coal and lignite; crude petroleum and natural gas	
3	Metal ores and other mining and quarrying products; peat; uranium and thorium	
7	Coke and refined petroleum products	
10	Basic metals; fabricated metal products, except machinery and equipment	
14	Secondary raw materials; municipal wastes and other wastes	
17	Goods moved in the course of household / office removals; baggage / articles accompanying travelers; motor vehicles being moved for repair; other nonmarket goods n.e.c.	

## SLIDO: Discussion

Are the presented scenarios and use cases addressing those with higher impact of EMS1 and EMS2 on European freight transport?

- 🗣️ Yes, agree
- 🗣️ No, I recommend ...(use chat box or contact speaker)

Impact and Validation  
(ongoing)

Baseline

EMS 1

EMS 1 and 2

EMS incl. external  
costs

EMS restricted on  
big cities

assessment  
of EMS in  
relation to  
baseline:  
modal split  
and CO2  
emissions )

# Advanced Energy Management Powertrain (AEMPT)

## Distributed Hybrid Powertrain

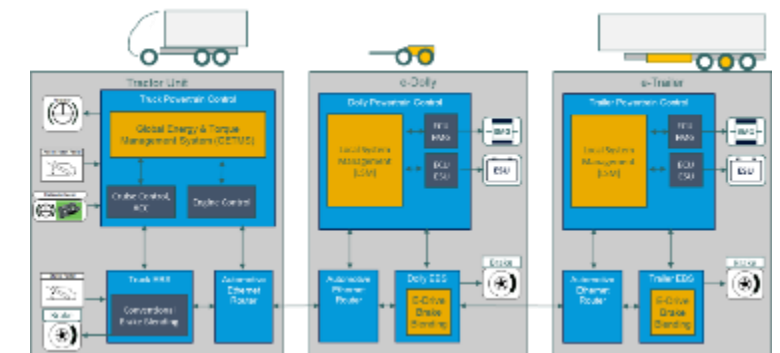

- ... consisting of conventional diesel engine in truck and additional electric powertrains in trailer units

## Global Energy Management System

- ... coordinates powertrains in truck and trailers
- ... communicates via (standardized) communication protocol with local system management of trailers

## Smart Power Dolly

- ... equipped with steerable front and driven rear axle
- ... supports manual operation via remote control

## Distributed Hybrid Powertrain

- ... reduces fuel consumption and emissions
- ... improves traction and driving stability (gradeability)
- ... allows for flexible combination of intrinsically efficient vehicle units

## Global Energy Management System

- ... allows for efficient drive train control and maximum recuperation
- ... supports control of up to five driven trailer units

## Smart Power Dolly

- ... allows for splitting of vehicle in self-driving units for manual shunting of trailers on terminals/yards

# AEMPT – Progress since Sept. 2020

## Development of vehicle units

- Adaptation of TRANSFORMERS trailer drivetrain control to AEROFLEX communication protocol
- Commissioning of AEMPT demonstrator (EMS1 vehicle) at the ZF-Test Track
- Comprehensive testing of
  - Functions of Global Energy Management System
  - Behavior of electric drivetrains
  - Automotive Ethernet Communication
  - Safety measures

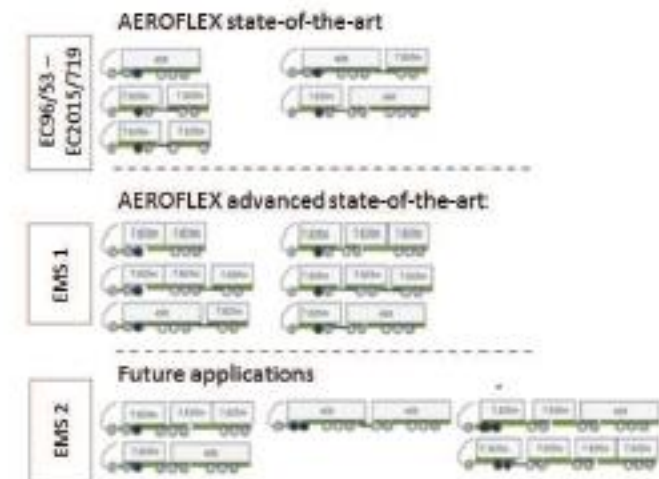

**All functions are working. After last tests in Munich, Truck, eDolly and eTrailer are ready for consumption test at IDIADA/Spain**

# Smart Power Dolly, next steps

- Smart Power Dolly allows splitting of vehicle in self-driving units for manual shunting of trailers in terminals/yards
- The dolly enables long vehicle combinations, as EMS1 and EMS2
- The dolly is equipped with an electric drivetrain, enabling the use of standard truck/tractor even at a GCW up to 74 tonnes
- The dolly can operate remote controlled and at a later stage it will be driving autonomous
- In future the dolly can be used also in combination with battery electric or fuel cell driven trucks
- Safe handling of vehicle and single units,  
Reduce energy consumption,  
Reduce number of driver,  
Reduce vehicle kilometers per ton freight,  
Reduce cost of operation.

# Smart Power Dolly, next steps

- Founding of a new consortium, the “knowledge and drivers”, to further develop the e-Dolly and bring it to market
- Analysis of the state of the art & cost/benefit of the prototype e-Dolly as is build and demonstrated
- Collection of typical use cases to further develop the market requirements and needs for a final e-Dolly portfolio
  - Define a minimum set of variants, dealing with the majority of market needs
- Finalization of:
  - the development portfolio and technology areas (e.g., functional testing, automated & autonomous driving, production, fast charging, road safety on public roads, multi-brand, .....)
  - Finalization and agreement on the deployment & exploitation roadmap & first draft business case for bringing the e-Dolly to the market
  - Roll out of scaling projects to demonstrate the benefits of the e-Dolly, and to convince and agree on the acceptance of the standards for type approval, homologation, and road access
- GoTo market strategy and production facilities

# Feedback request AEMPT and Smart Power Dolly

- AEMPT: An e-Trailer or e-Dolly can save fuel costs.  
Which obstacles do you see for Integrating an e-Trailer or e-Dolly into logistic processes?
- A plug-in option in the trailer or dolly could further decrease fuel consumption.  
What do you see as a minimum amount of fuel saving in %, to consider integrating an additional charging process into your logistic processes?
- To operate a double trailer combination (tractor+ dolly+2semi trailers), a 6x4 tractor is necessary to ensure enough traction.  
An e-Trailer or e-Dolly would allow to operate such a combination with a 4x2 tractor.  
How high could the extra-costs for such a feature be so that you would consider buying it?
- An e-Dolly will allow to maneuver trailers in terminals.  
In a first step with a remote control, in future automated.  
How high could the extra-costs for such a feature be so that you would consider buying it?
- Do see any other advantages of using an e-Trailer or eDolly?

14:00h 🌐 **Opening Session:**

- 🌐 Welcome and rules of the webinar
- 🌐 ALICE introduction (by Fernando)
- 🌐 Project overview and highlights (by Ben/Per/Giuseppe)

~14:30h 🌐 **Session I - Short presentations followed by Q&A and interactive Sessions on the following topics:**

- 🌐 P&G use case and next steps: Smart Loading Units and Tools into Practice (by Ton/Hilal)
- 🌐 Modelling of freight 2040: Implications of High-Capacity Transport (by Andreas/Christoph)
- 🌐 e-Dolly and the next steps (by Julius/Henning)

🌐 **Intelligent Access Policies initiative and next steps (by Marta/Elisah)**

~15:45h 🌐 **Session II - Outlook and closure:**

- 🌐 R&I opportunities beyond AEROFLEX (by Ben)
- 🌐 Horizon Europe opportunities (by Ben)
- 🌐 Outlook and closure (by Ben/Fernando)

## EC tenders

- Bodies and trailers –development of CO2 emissions determination procedure
- Further development of VECTO and update with new technologies

## EU Regulation

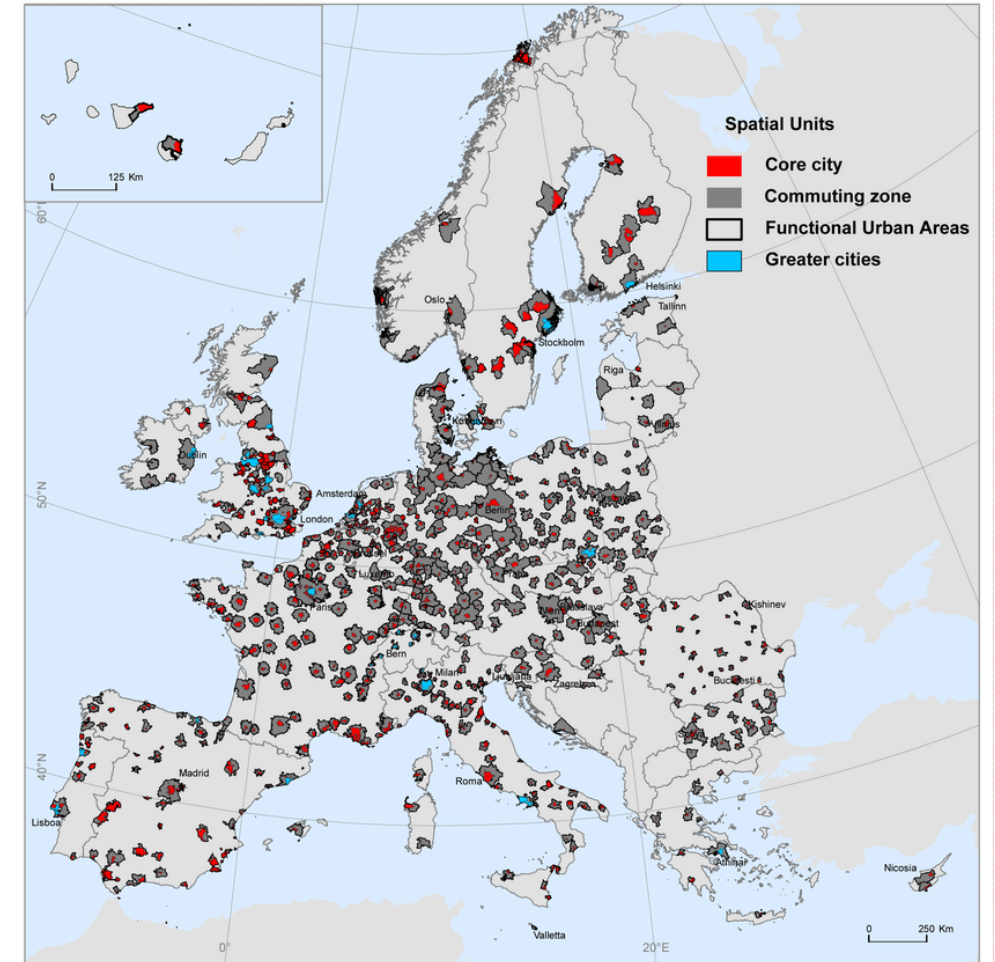

- Amendment on Directive (EU) 2015/719 and Directive 96/53/EC of Weights and Dimensions

# Intelligent Access policies are an opportunity to take away the burdens

-  Group of experts to identify and agree on technical requirements to be linked with the AEROFLEX initiative, the Intelligent Access Policies (IAP) Task Force
-  **Access policies, an opportunity to take away the burdens through**
  -  **management of access, the right truck - the right cargo - the right time – the right cost**
  -  **regaining the control on the logistics and transport operation**
-  Need to develop “the Pathway to Intelligent Access Policies through Europe to safeguard freight transport in a healthy, safe and environmentally friendly context”

# Intelligent Access Policies for Safe and Efficient Use of Infrastructure

- “Pathway to Intelligent Access Policies through Europe to safeguard freight transport in a healthy, safe and environmentally friendly context”

- Task force to promote European Vehicle Access Regulations (EVAR) & Management for Electronic Traffic Regulations (METR) in Europe
- High level harmonized rules, adoption of parameters to manage local circumstances
- Current directive on weight & dimensions already allow EMS vehicles at regional and national level
- Group of experts to identify and agree on technical requirements using standard and EMS vehicles for EU cross border freight transport

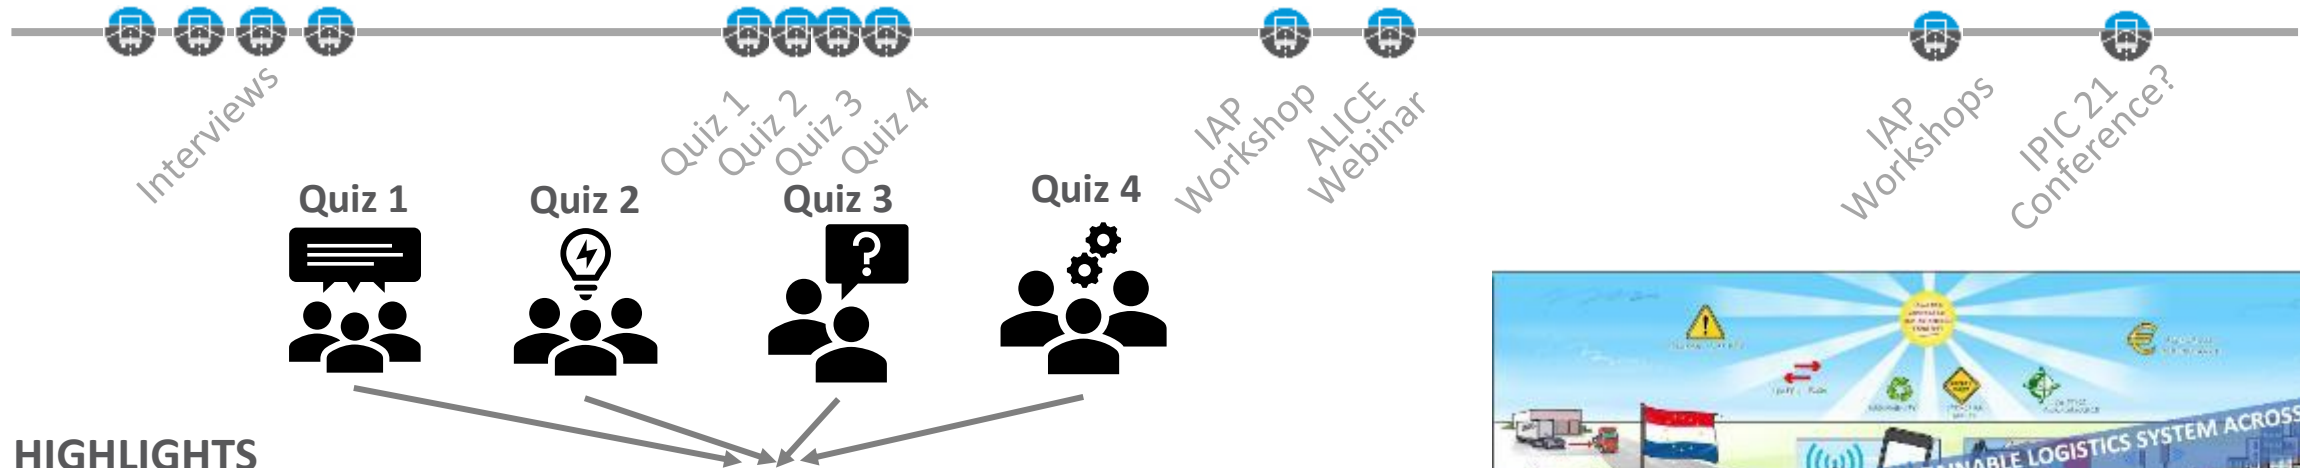

# IAP Task Force, interviews, quizzes, workshops

December/January

February

March

May/June

## HIGHLIGHTS

- Positive view of EMS vehicles because of their benefits regarding CO2 emissions and cost reduction
- Harmonization and shared-view. IAP to start working at local level and in parallel communicate at EU level on the benefits of IAP
- Pick-up the interest of DG MOVE and use it as a momentum (CO2 emissions, road safety, growth in demand)

How do we get sustainable & efficient (EMS) vehicles on the road in Europe?

- 🌐 Harmonized policies and shared vision needed

What are the challenges to implement IAP in the EU?

- 🌐 Resistance to change
- 🌐 Resistance to share data

What are the success factors for IAP in the EU?

- 🌐 Green deal
- 🌐 Trust, and scalability important for success

What are the opportunities to use IAP as enabler for more sustainable transport in the EU?

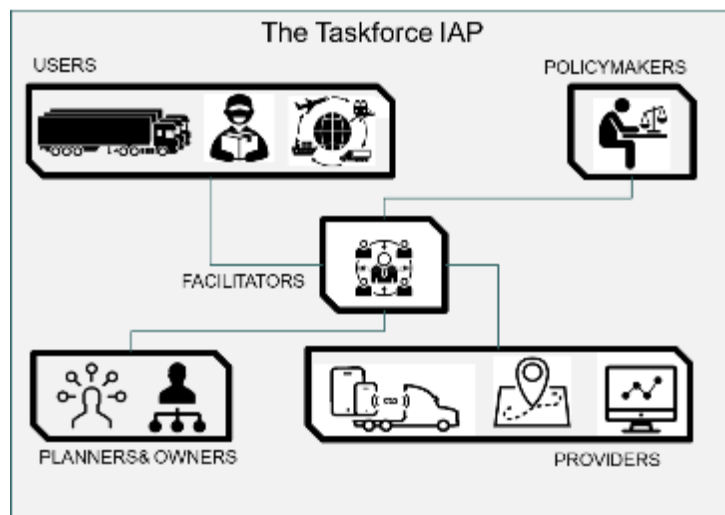

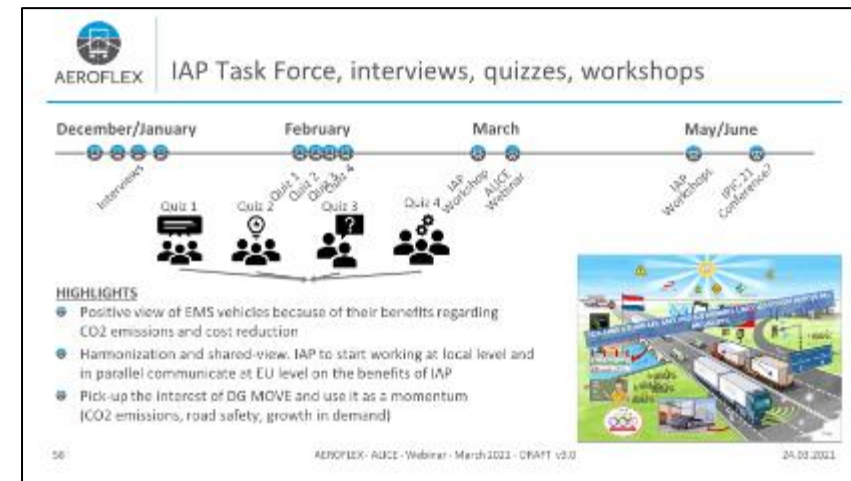

- 🌐 Reduction of road freight emission biggest opportunity

Aggregated results based on 4 quizzes: n=19; n=19)

# Workshop creating a common story

## Pilot NL EMS2 introduction supported by Intelligent Access Policies

The Super EcoCombi is on its way

# Output workshop, first draft and in need of follow up

Special edition, December 2030

## TIME

First the iPod, then the iPhone, now the "iAP": getting your goods to you, green and groovy!

Intelligent Access puts the right truck on the right road (at the right time)

### USERS

- Community, reclaiming streets
- Trust and transparency
- Better planning for logistics & transport

- Less stressed roads (congestion & accidents)
- Advantages overachieved a safe and well-maintained infrastructure

### POLICYMAKERS

- IAP contribute to a more robust system by allowing instead of restricting

- System using standards as plug in being in place

- Neutral institution in which all stakeholders are present

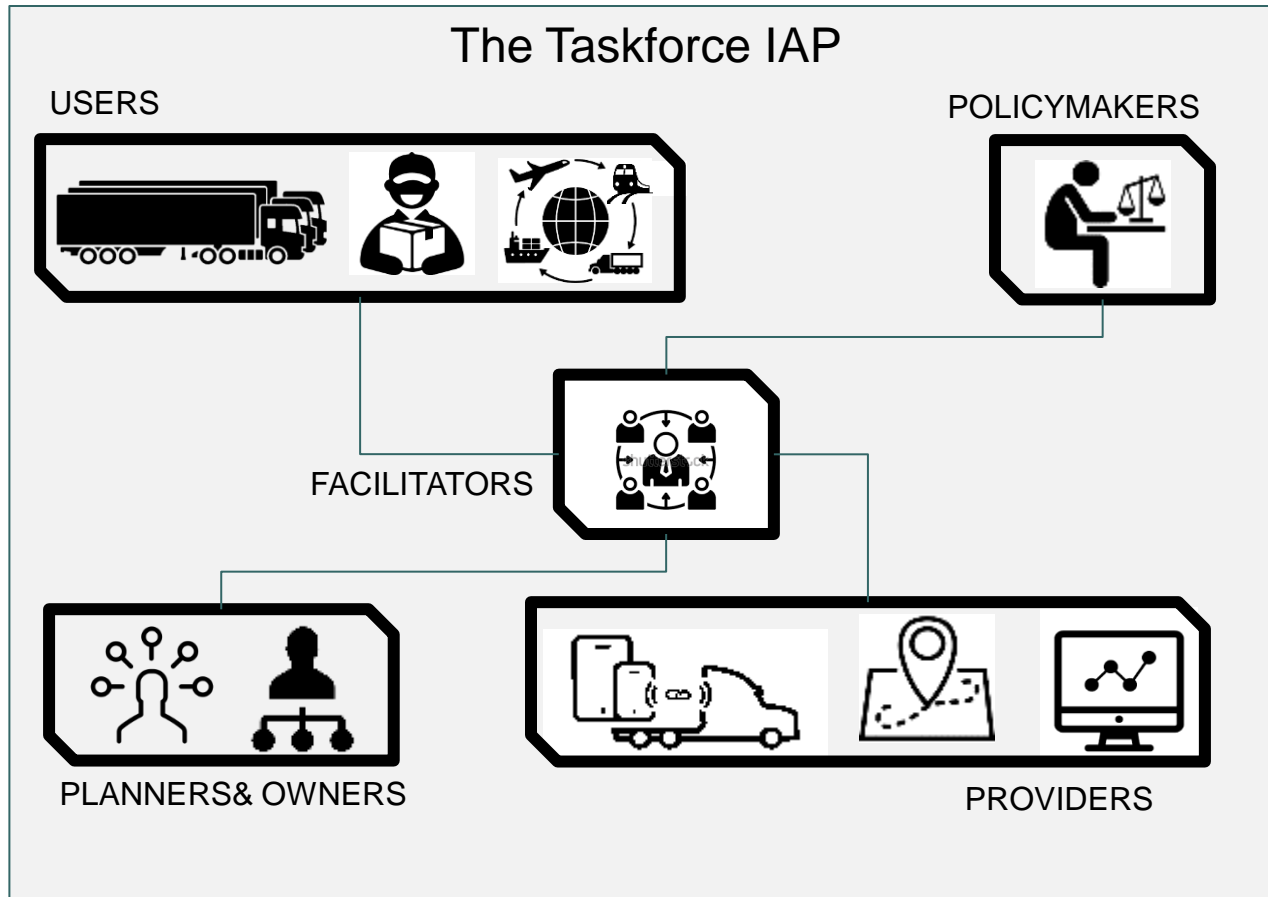

### core achievements and steps

- Create awareness
- Get all stakeholders involved
- A governmental mandate to start IAP process
- An organization drives the change
- Small scale show cases on regional, national level,
- .....
- .....

# IAP Task Force, next steps

 Return your opinion by slido or mail

-  How can we support the group of experts, identifying technical requirements for EMS cross border?
-  How can stakeholders support the IAP Task Force?
  -  Develop the concrete steps / activities
  -  How to secure the budget
  -  How to bring the IAP on the EU agenda

-  Do you want to join the IAP Task Force as active person?
-  Do you want to contribute the IAP Task Force as advising expert?

## Agenda Part 3

### 14:00h Opening Session:

-  Welcome and rules of the webinar
-  ALICE introduction (by Fernando)
-  Project overview and highlights (by Ben/Per/Giuseppe)

### ~14:30h Session I - Short presentations followed by Q&A and interactive Sessions on the following topics:

-  P&G use case and next steps: Smart Loading Units and Tools into Practice (by Ton/Hilal)
-  Modelling of freight 2040: Implications of High-Capacity Transport (by Andreas/Christoph)
-  e-Dolly and the next steps (by Julius/Henning)
-  Intelligent Access Policies initiative and next steps (by Marta/Elisah)

### ~15:45h Session II - Outlook and closure:

-  R&I opportunities beyond AEROFLEX (by Ben)
-  Horizon Europe opportunities (by Ben)
-  Outlook and closure (by Ben/Fernando)

#### Use Slido:

-  To make your questions and remarks known
-  To collect opinions
-  To challenges audience
-  To find support for IAP and eDolly
-  To join project ideas beyond AEROFLEX

 The AEROFLEX project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement no 769658
